

Chillpen.club Platform Feedback and Required Updates

Prepared for IT technician - revised version with all 10 points and screenshot examples

Overall direction: The platform already has a strong dark, cinematic, premium, writer-focused design. The main work now is to complete the user flow, connect the backend logic, improve the logged-in dashboard, and make the discovery, reading, saving, writing, payment, and profile flows work smoothly end to end.

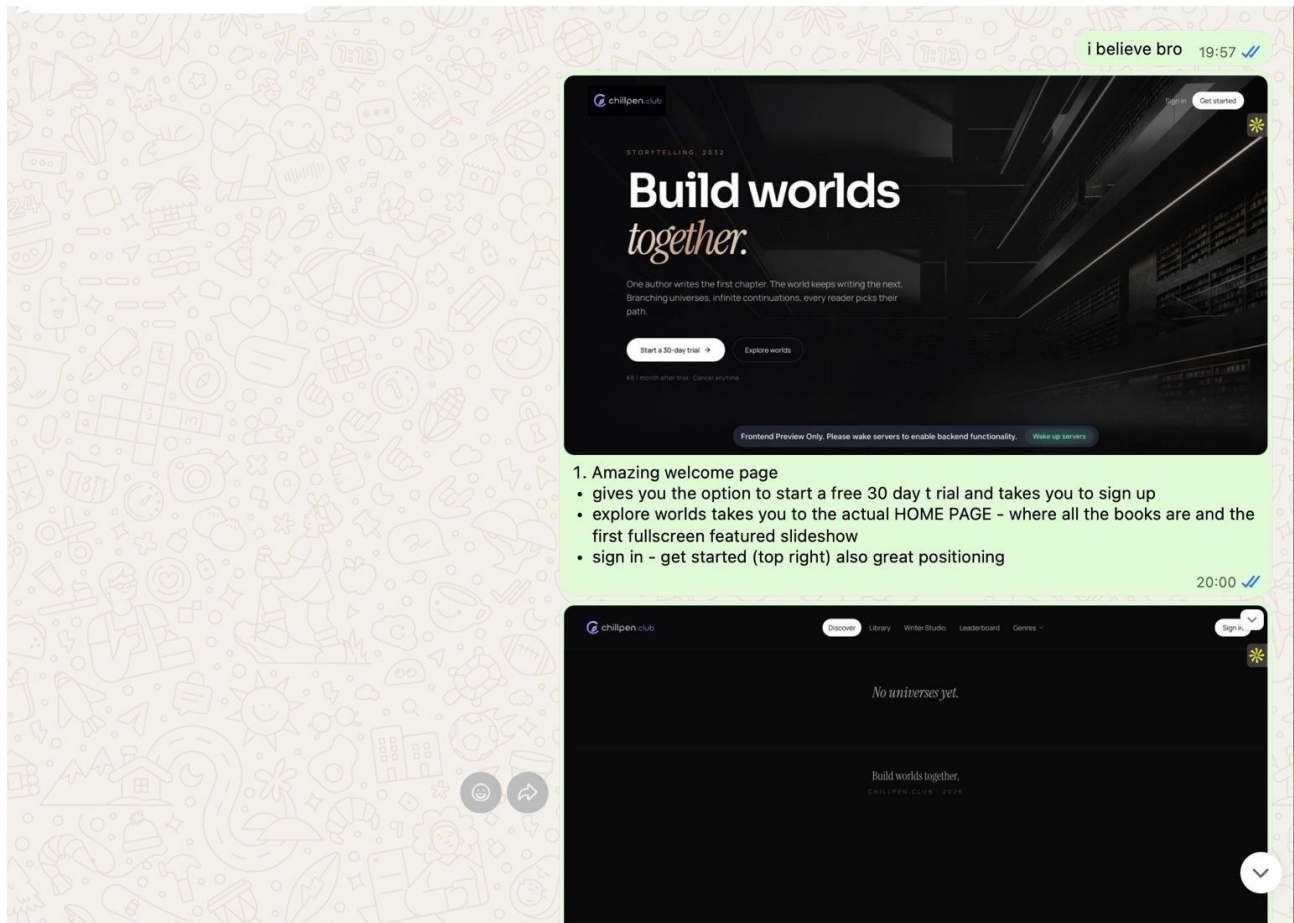

Main priority fixes

- Fix sign-up and login flow, including the missing card/payment step after account creation.
- Connect the EUR 8/month membership with the 30-day free trial properly.
- Make Home / Discover show books and universes when content exists, not only the empty state.
- Connect Save buttons on book cards to the Library.
- Make leaderboard profiles clickable and create public writer profiles.
- Add proper author bios, comments, and coin tipping.
- Finalize the genre dropdown and filtering logic.
- Make Continue branch open Writer Studio with the correct universe and chapter preselected.
- Redesign the user panel so it feels premium and writer-focused.
- Add a clean How it works section below the landing page hero.

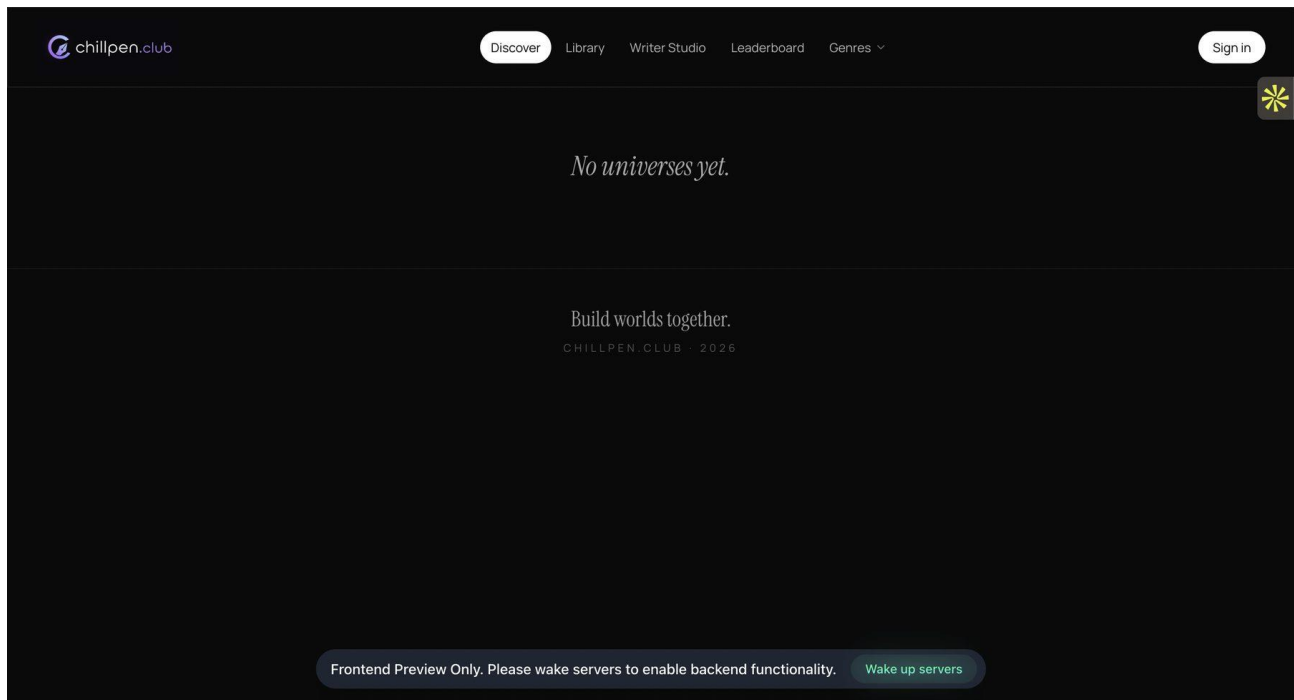

1. Welcome / Landing Page

- Keep the current premium hero design as the main landing page for new visitors.
- Keep Start 30-day trial as the primary call-to-action and route it directly to sign-up.
- Keep Explore worlds as the secondary button and route it to the Home / Discover page.
- Keep Sign in / Get started in the top-right corner because the positioning is good.
- Once a user is signed in, avoid confusing public landing buttons and route them toward Discover, Library, Writer Studio, or the user panel.

Example screenshots

WhatsApp reference: welcome page and start flow feedback.

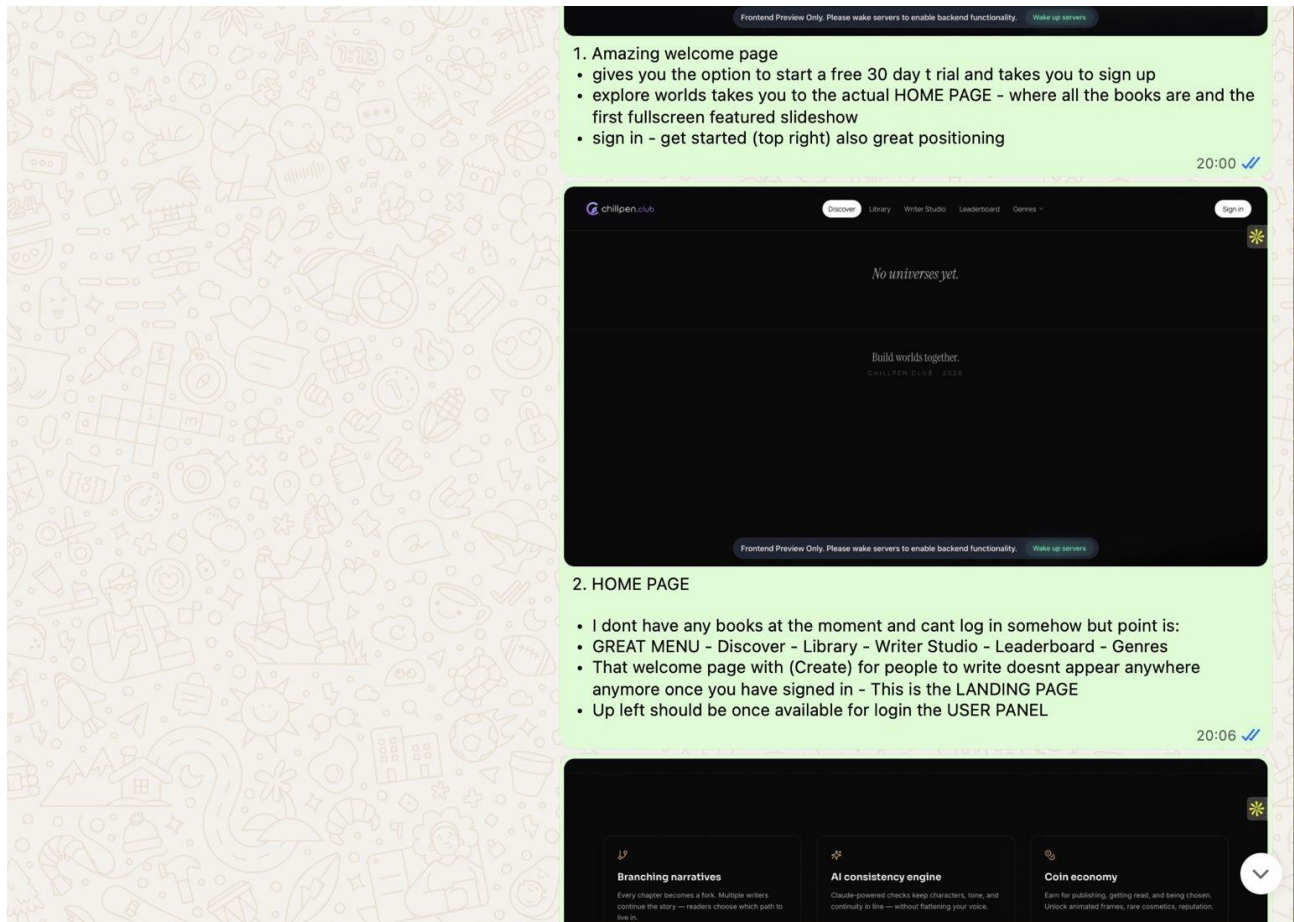

Clean example: Signed-out empty Discover page with wake server notice.

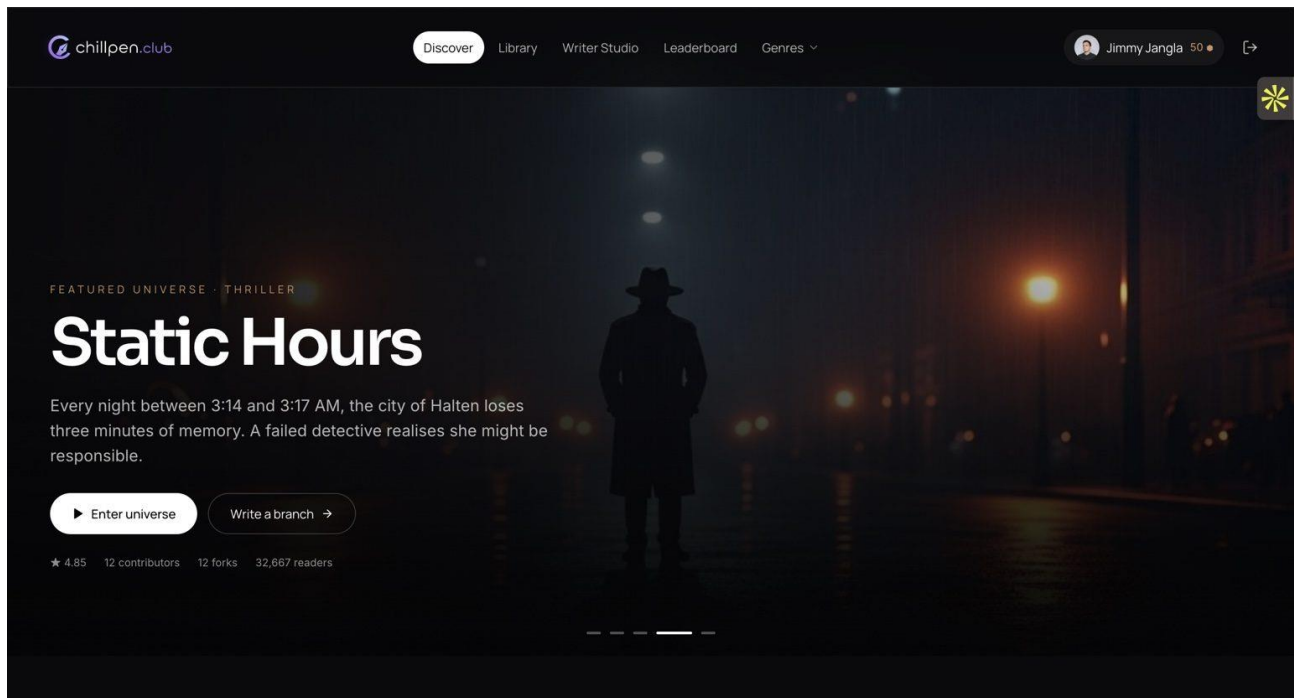

2. Home / Discover Page

- Use Discover as the main browsing page for all available books and universes.
- Keep the core navigation: Discover, Library, Writer Studio, Leaderboard, and Genres.
- When content exists, show books and universes instead of only the No universes yet empty state.
- Use the full-screen featured universe slideshow at the top, followed by structured shelves such as Trending now, New this week, Most forked, Completed universes, Rising writers, and Recommended for you.
- Do not show the Create button randomly on the public homepage. Writing should live inside Writer Studio.

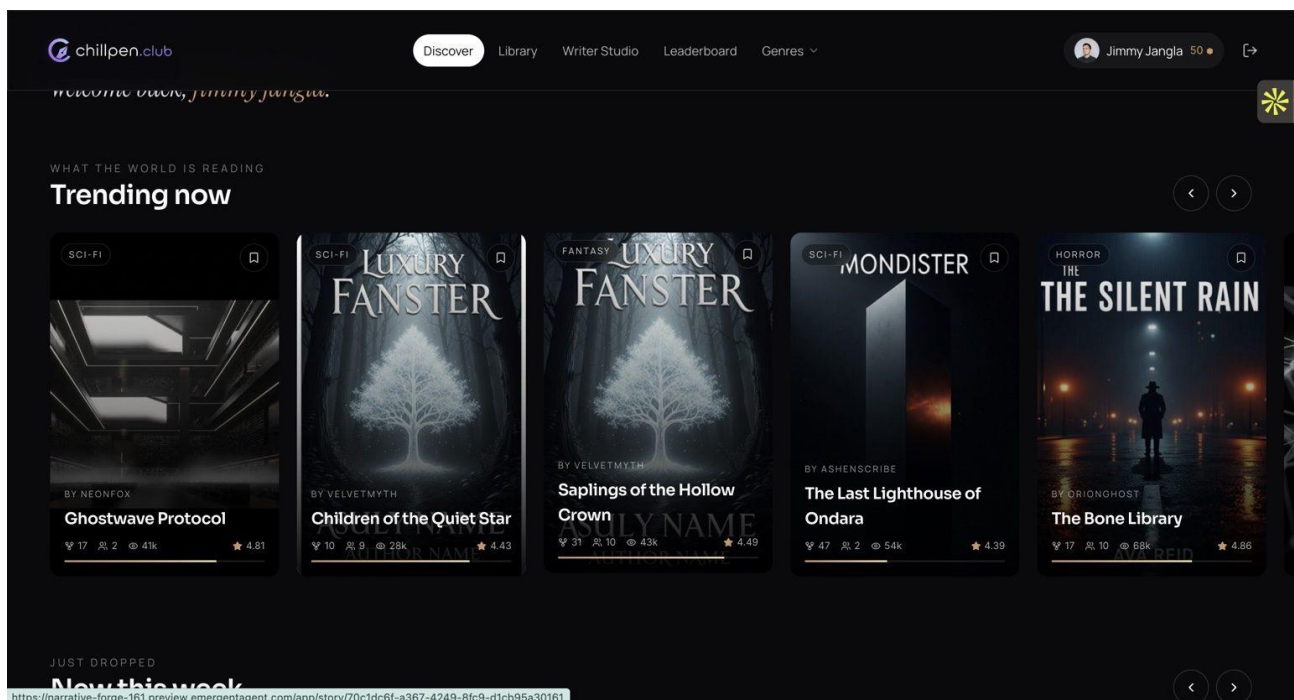

Example screenshots

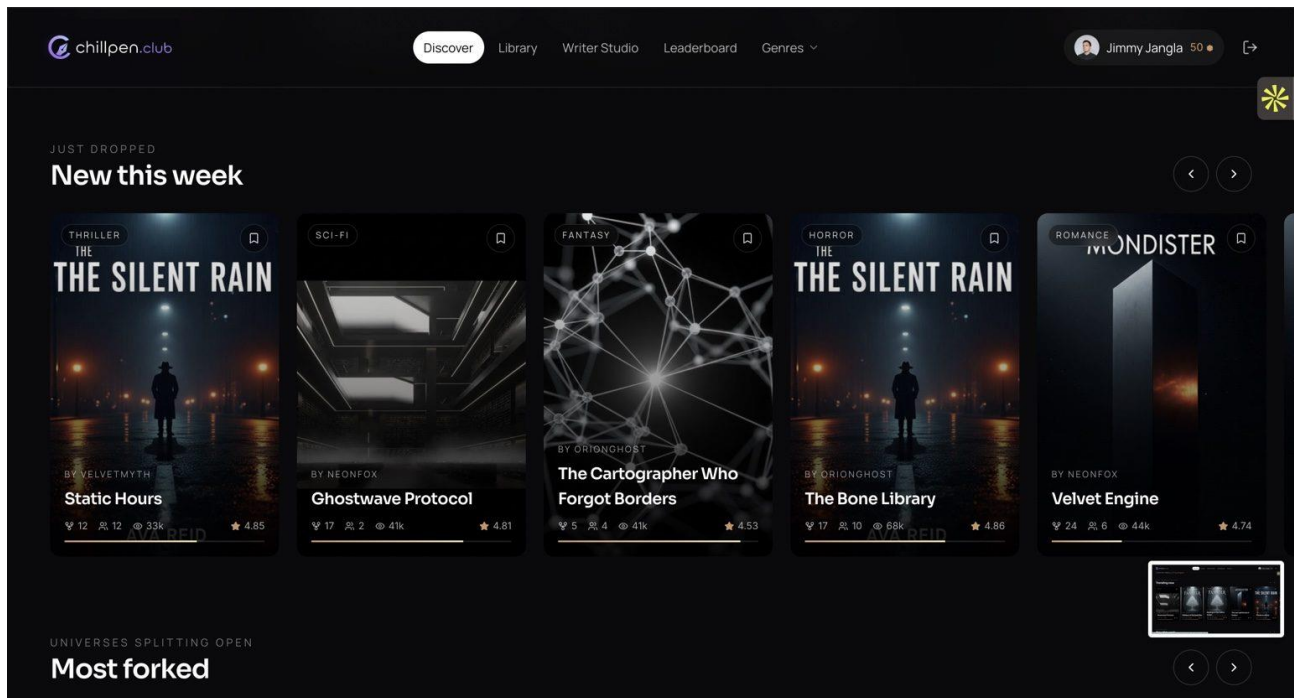

WhatsApp reference: Home / Discover page empty-state feedback.

Clean example: Discover featured universe carousel.

Clean example: Trending now shelf and book cards.

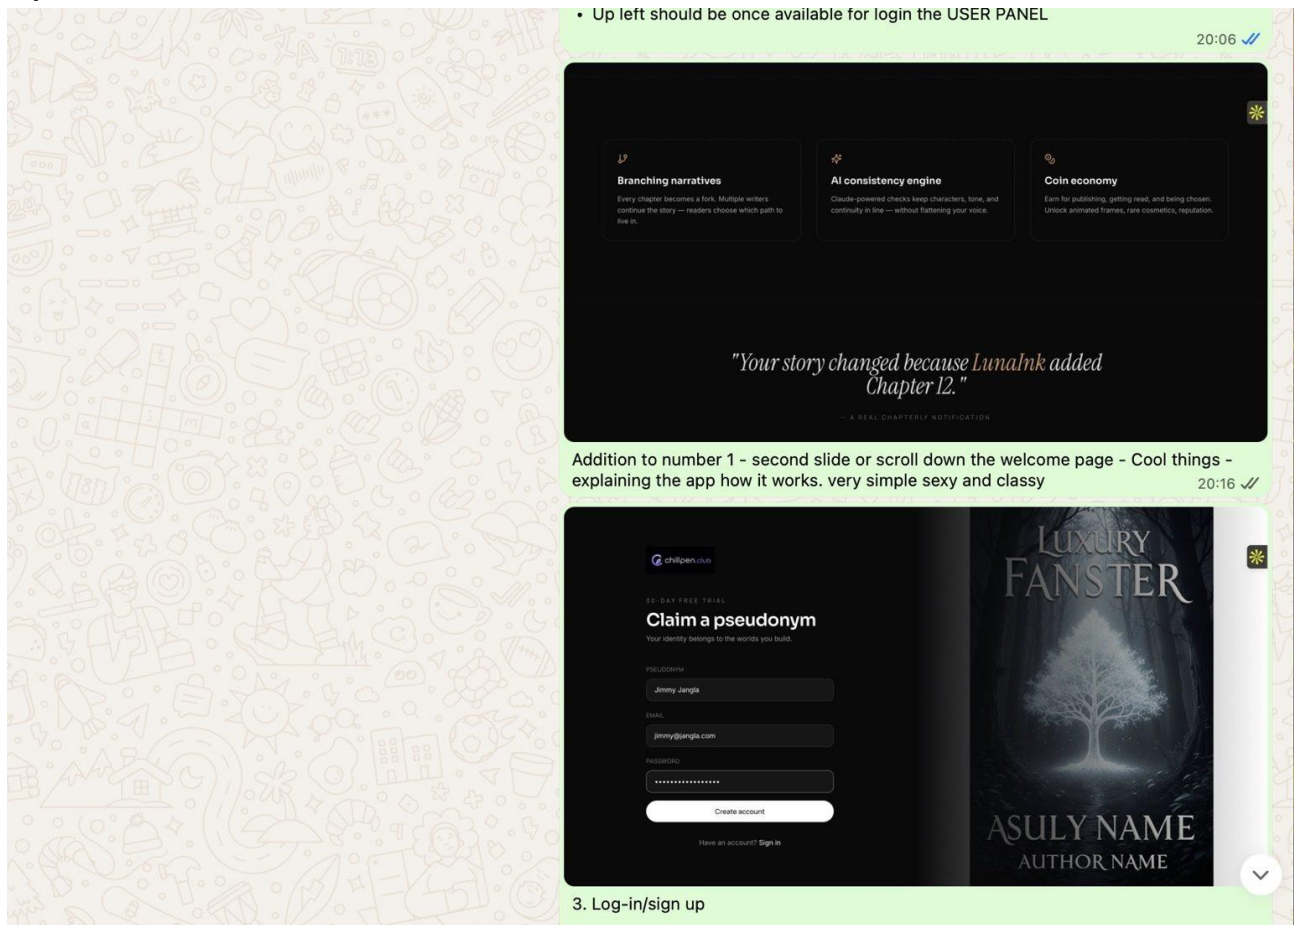

Clean example: New this week shelf.

3. How It Works Section Under the Welcome Page

- Add a second scroll-down section below the landing hero.
- Explain the app in a simple, classy, premium way without too much text.
- Use the current feature-card logic: Branching narratives, AI consistency engine, and Coin economy.
- Explain that readers choose paths, writers continue universes, AI checks continuity, and coins support reputation, rewards, cosmetics, and tips.

Example screenshots

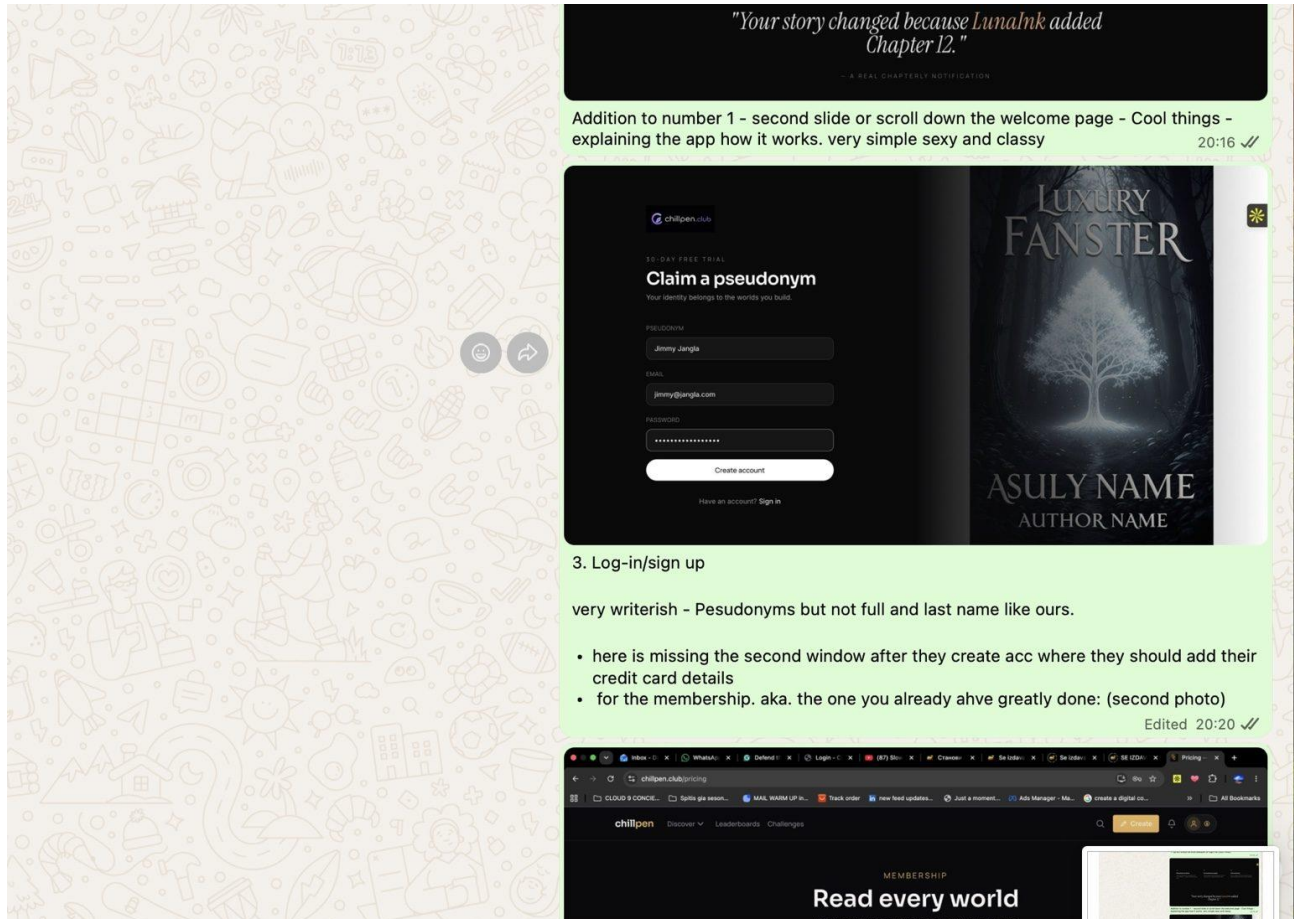

WhatsApp reference: How it works section and sign-up note.

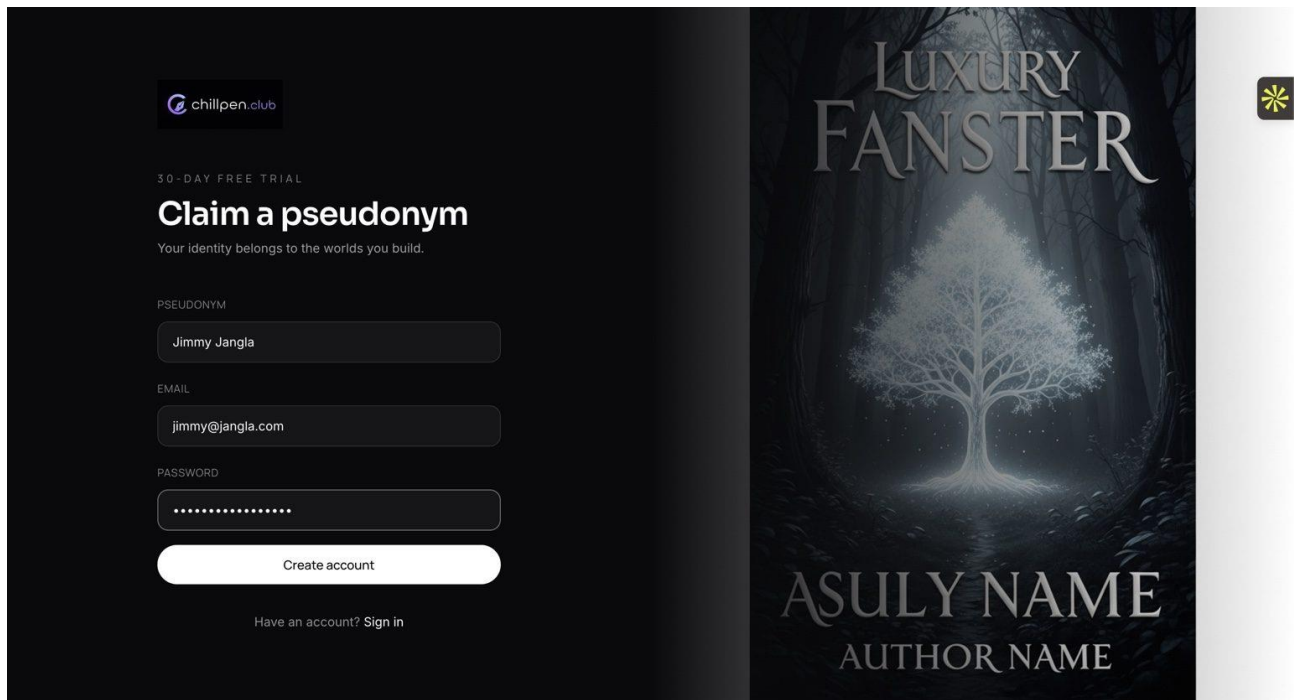

4. Sign-Up / Login Flow

- Keep the Claim a pseudonym concept. It is much more writerish than asking for first name and last name.
- Use pseudonym, email, and password as the core sign-up fields.
- After account creation, add the missing second step for card/payment details.
- The flow should be: create account, add payment details, start 30-day free trial, then enter the platform.
- Make sure login works properly and routes users to the right logged-in experience.

Example screenshots

WhatsApp reference: pseudonym sign-up and missing payment step.

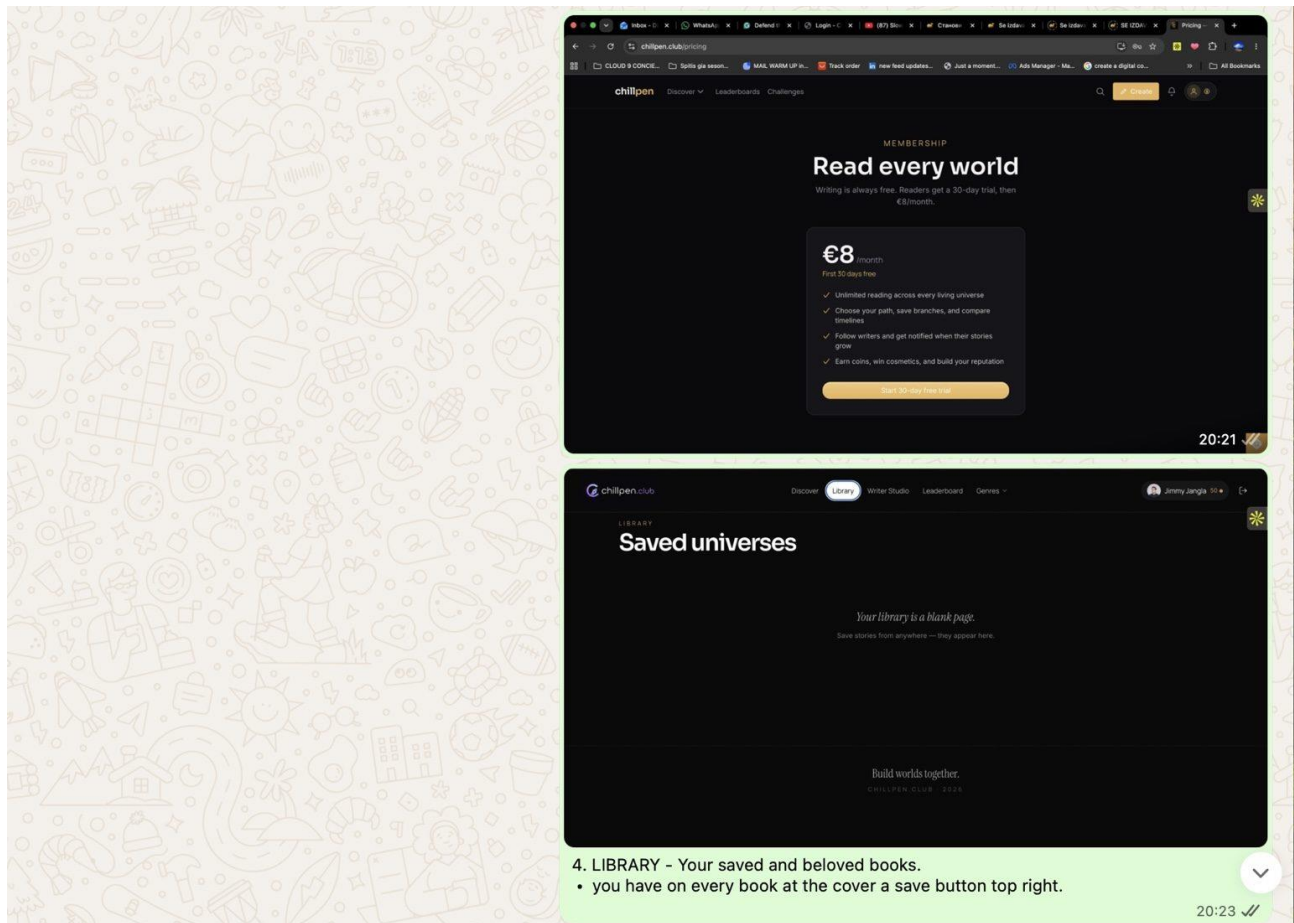

Clean example: Claim a pseudonym sign-up screen.

5. Pricing / Membership Page

- Keep the simple EUR 8/month structure.
- Keep First 30 days free clearly visible.
- The CTA should connect directly to account creation and the payment/card details step.
- The user should not get lost after sign-up. The membership flow must be clear and linear.

Example screenshots

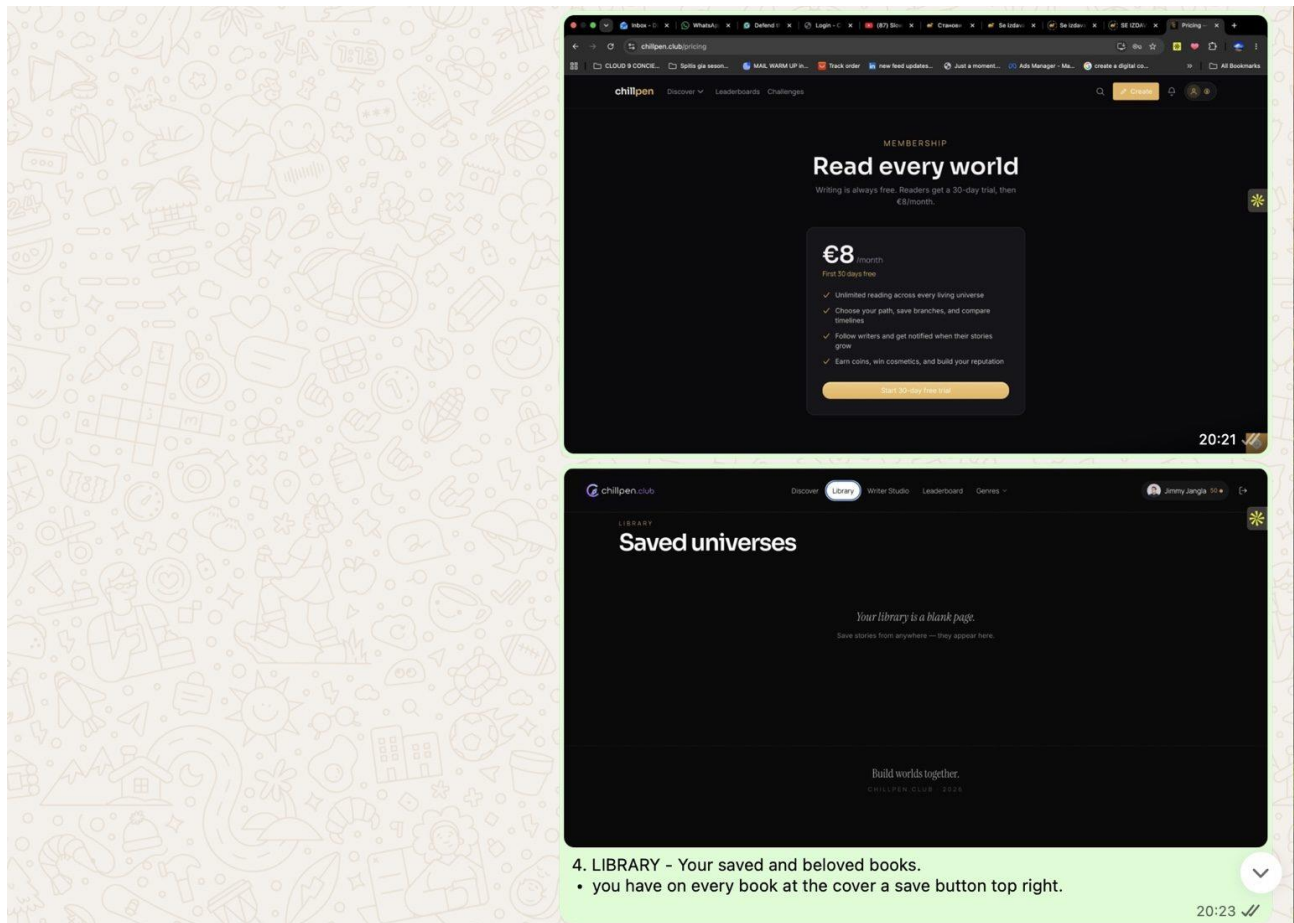

WhatsApp reference: pricing and Library page.

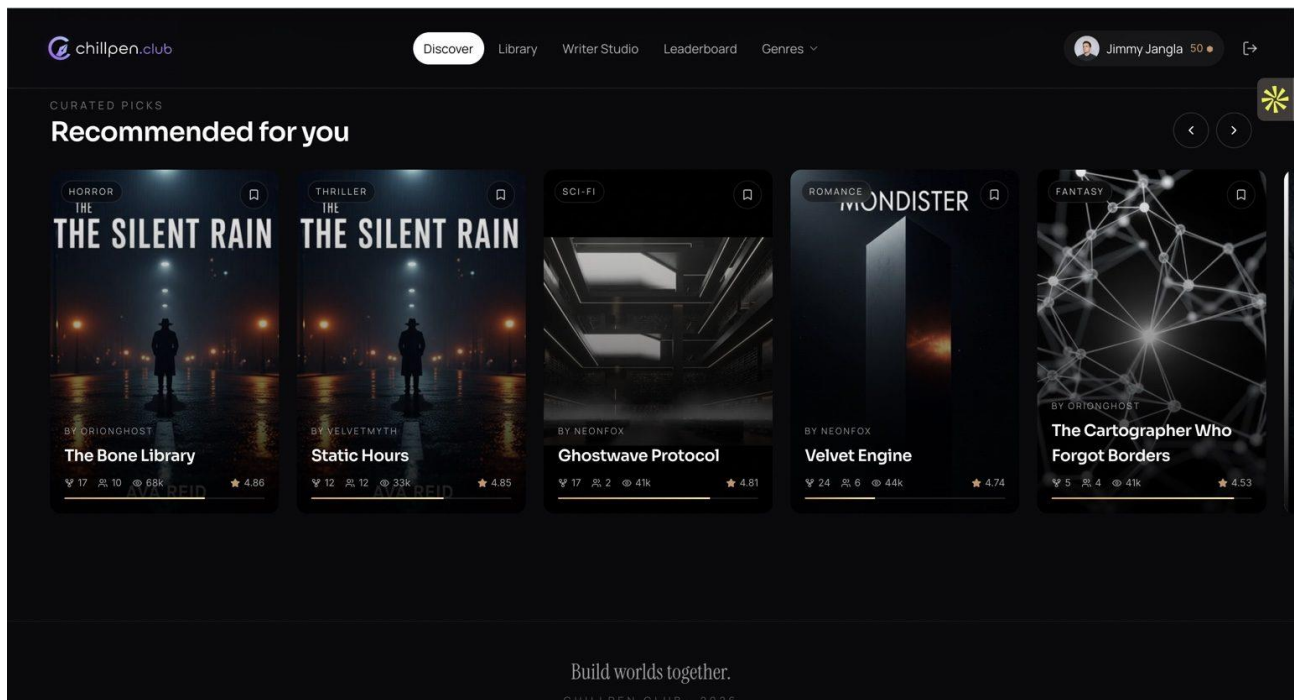

6. Library Page

- Library should show the user's saved and beloved books/universes.
- Every book card should have a clear Save button at the top-right of the cover/card.
- When a user saves a book, it should appear automatically in Library.
- The empty state is fine for now, but once saved books exist, the page must display them cleanly and beautifully.
- The Library should feel like a personal reading shelf.

Example screenshots

WhatsApp reference: pricing and Library page.

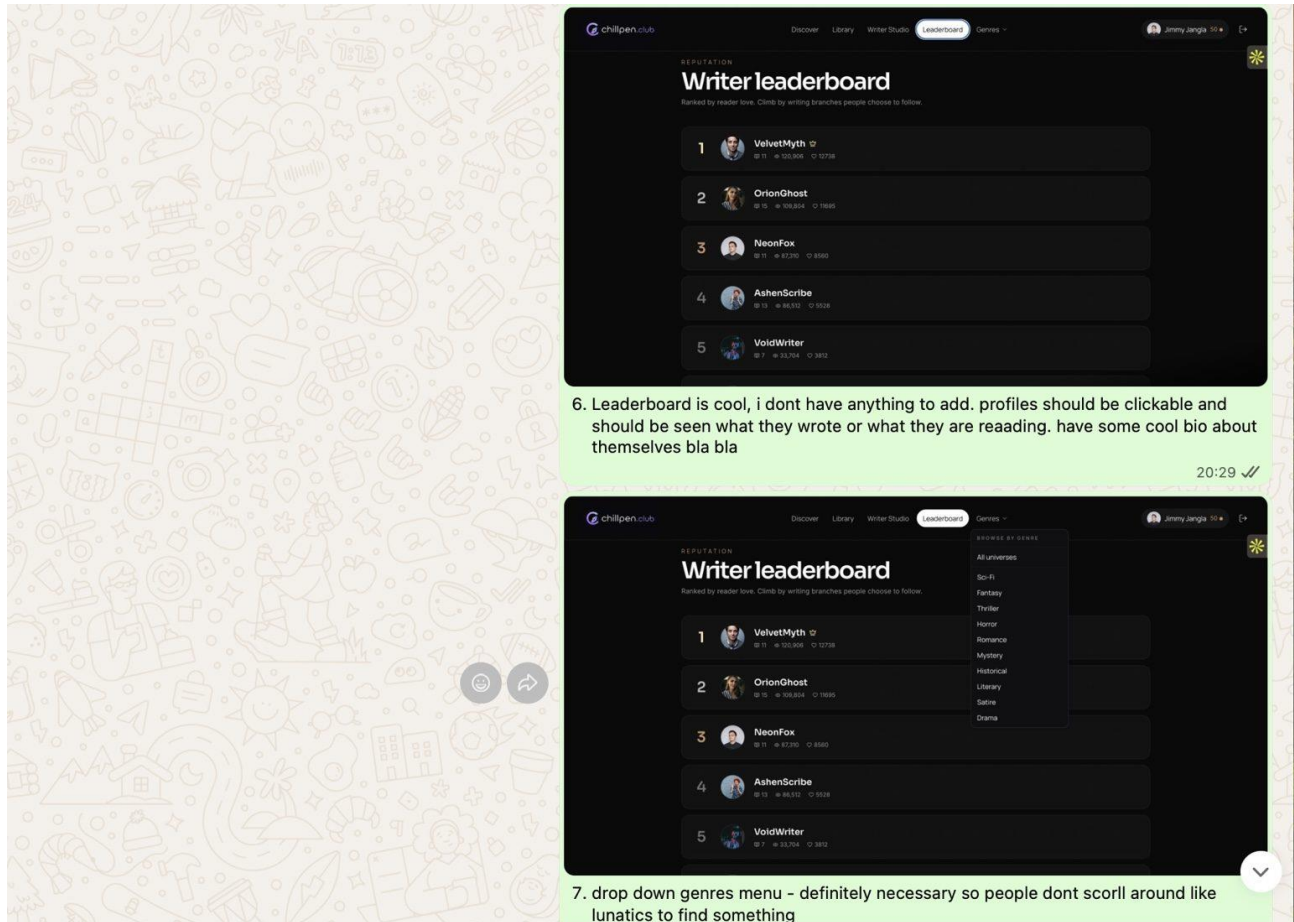

Clean example: Recommended for you shelf and footer.

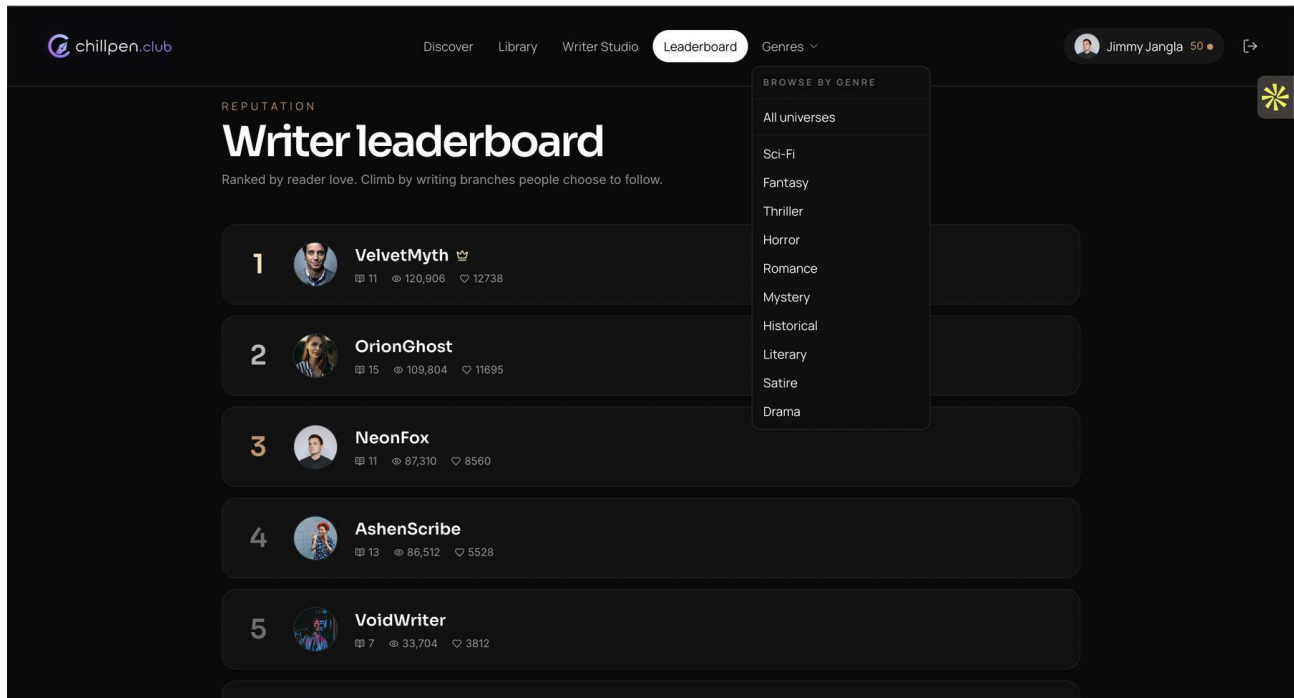

7. Leaderboard and Public Writer Profiles

- The leaderboard design is strong and should remain.
- Leaderboard profiles must be clickable.
- Clicking a writer should open a public writer profile.
- The public profile should show writer bio, written works, reading or following activity, reputation, coins or points, ranking, and approved chapters.
- The goal is to make the leaderboard social and useful for writer discovery, not only a static ranking.

Example screenshots

WhatsApp reference: [leaderboard feedback](#).

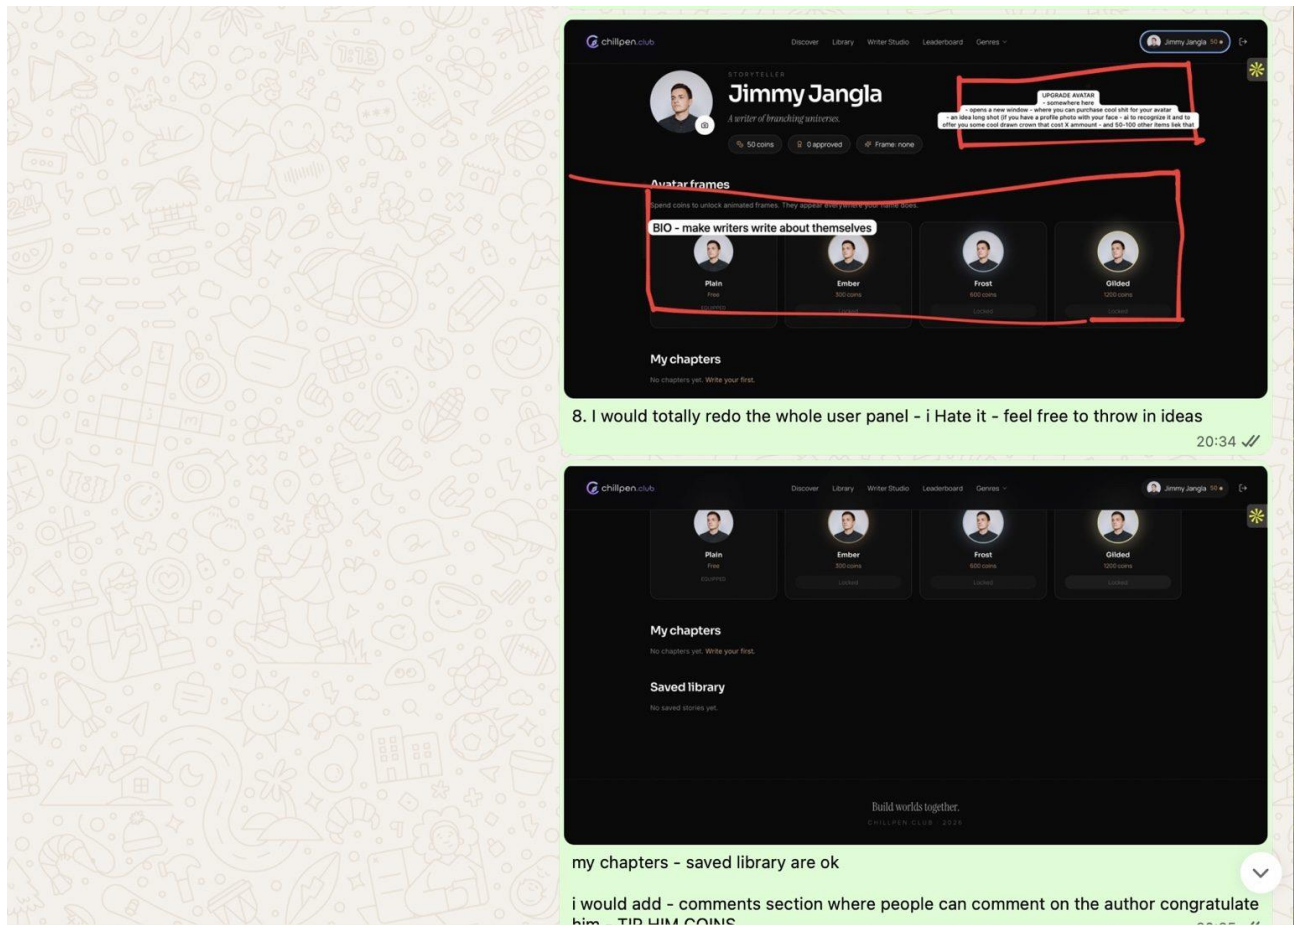

Clean example: Leaderboard with genre dropdown.

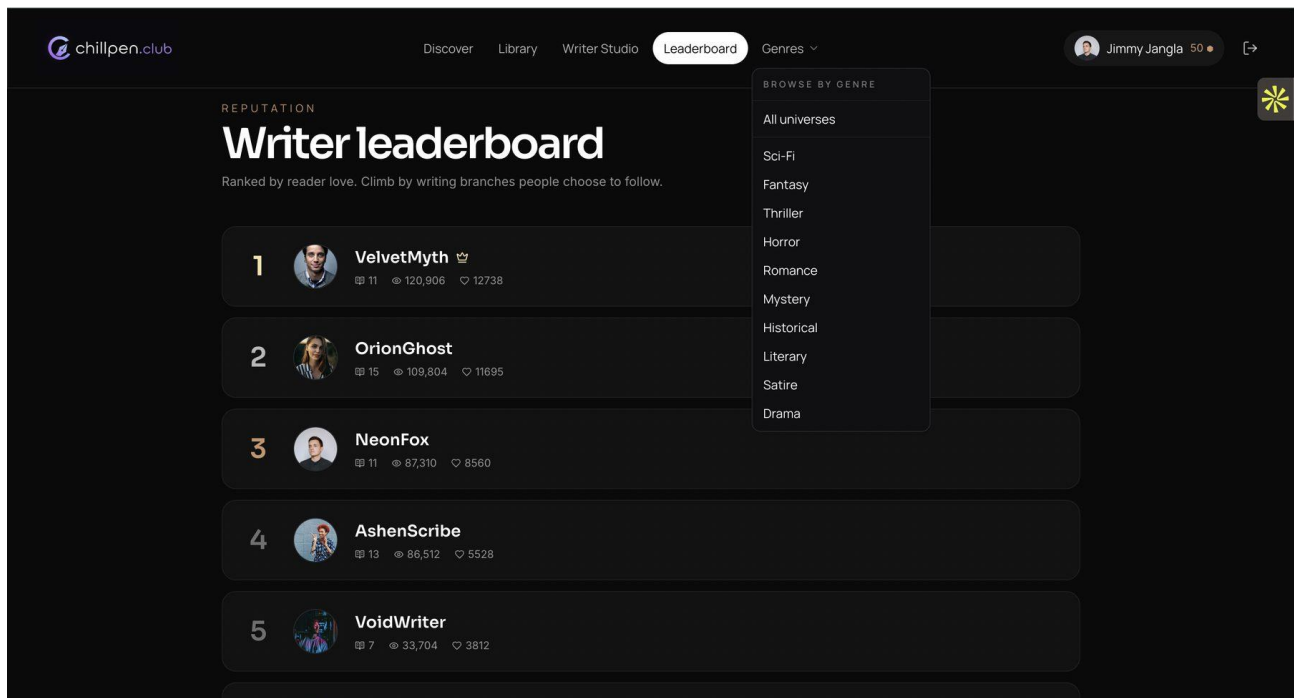

8. Genres Dropdown Menu

- Keep the Genres dropdown in the main navigation.
- Users should be able to browse by genre without scrolling endlessly.
- Suggested genres: All universes, Sci-Fi, Fantasy, Thriller, Horror, Romance, Mystery, Historical, Literary, Satire, and Drama.
- Selecting a genre should filter the Discover/Home page immediately.

Example screenshots

WhatsApp reference: genres dropdown feedback.

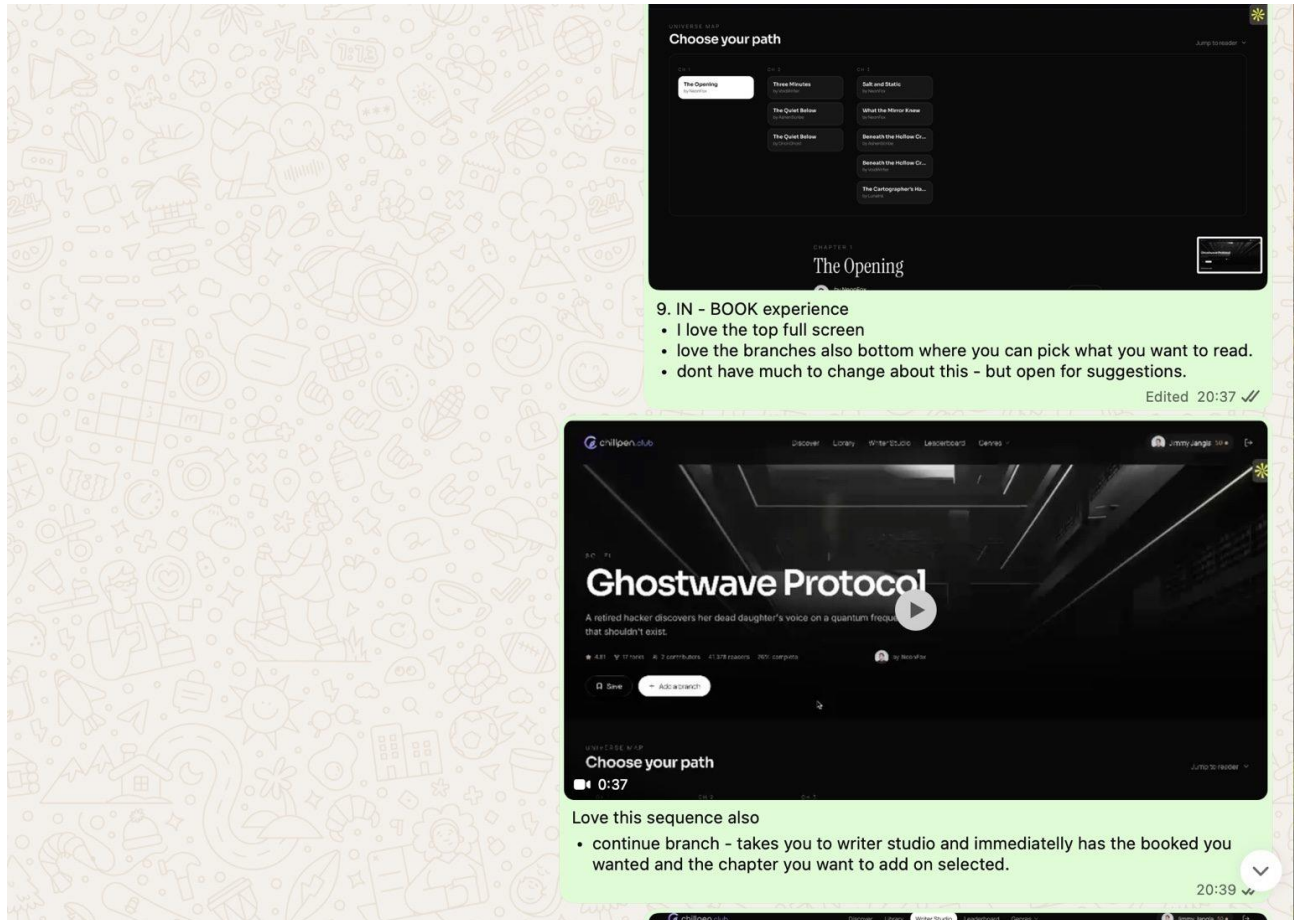

Clean example: Leaderboard with genre dropdown.

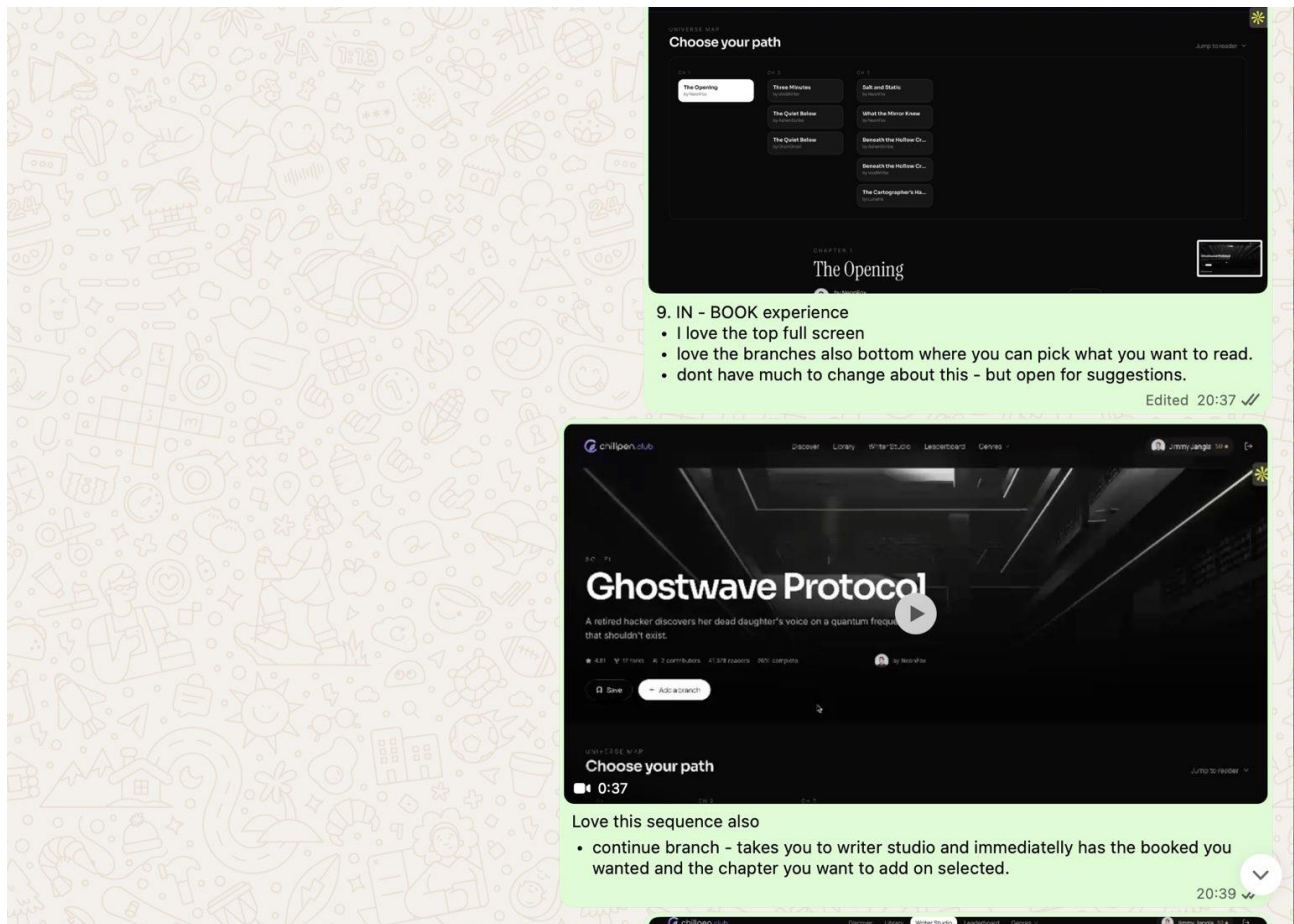

9. In-Book Reading Experience and Continue Branch Flow

- The in-book experience is very good and should mostly remain as it is.
- Keep the full-screen cinematic universe hero.
- Keep the Choose your path universe map and branch selection logic.
- When a user clicks Continue branch or Add a branch, they should be taken directly to Writer Studio.
- Writer Studio should open with the correct universe and selected chapter/branch already preselected.
- The ideal flow is: open book, select branch/path, continue branch, Writer Studio opens, selected universe and chapter are already chosen, user starts writing immediately.

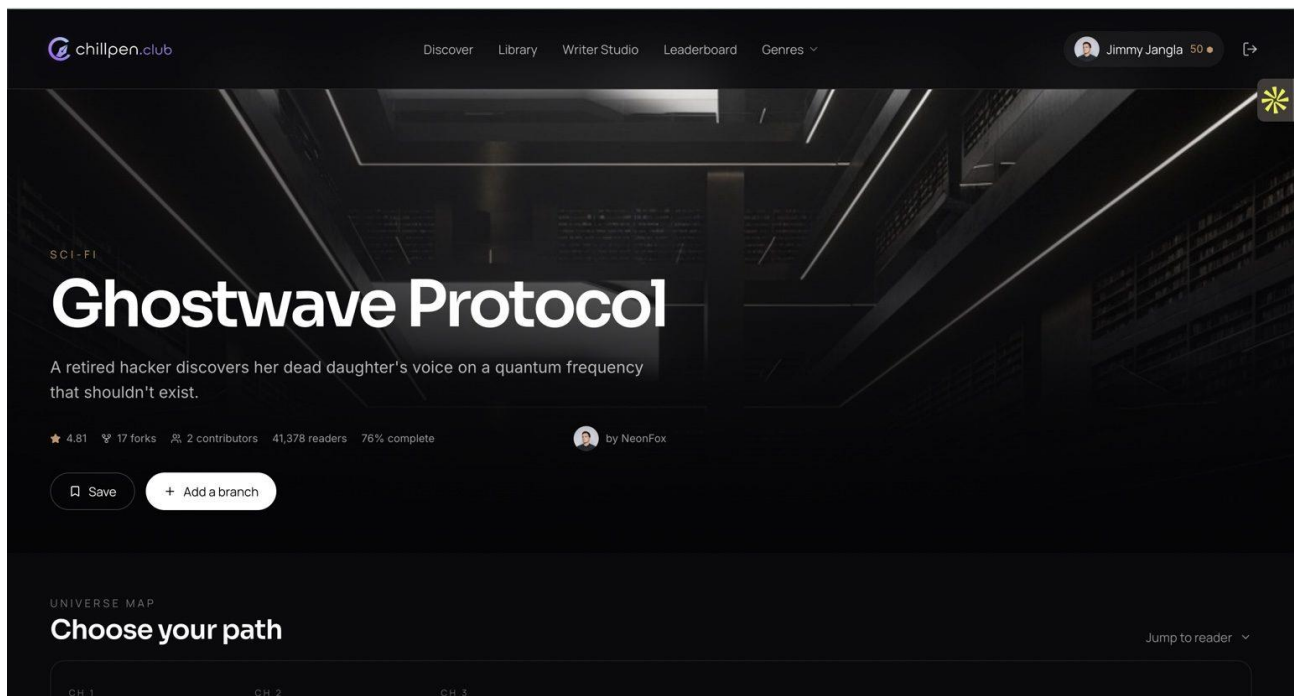

Example screenshots

WhatsApp reference: in-book experience and branch flow feedback.

WhatsApp reference: continue branch sequence feedback.

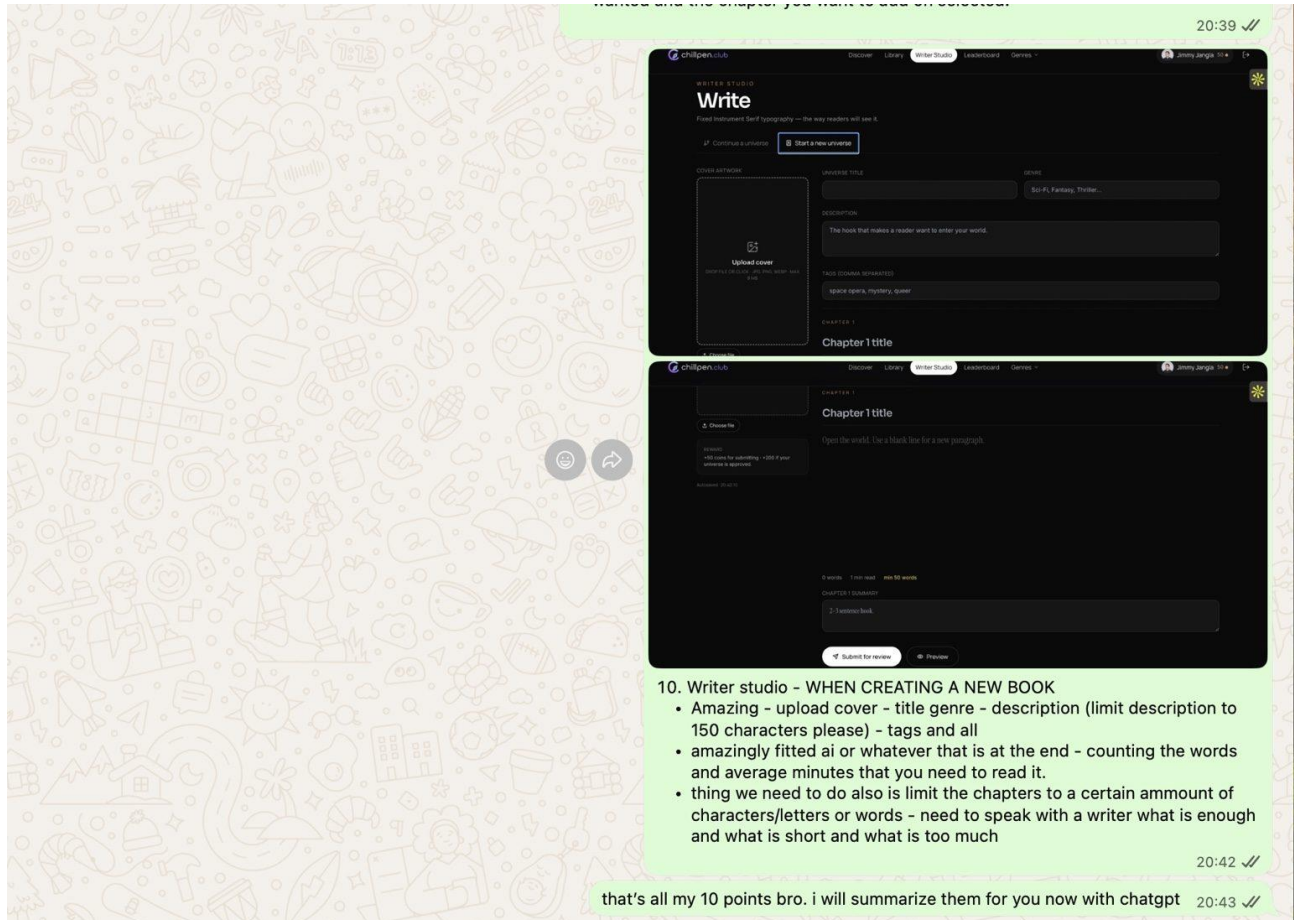

Clean example: In-book universe page and Choose your path.

10. Writer Studio / Creating a New Book

- Writer Studio is very good and should feel like a premium writing room, not just a form.
- Keep the main fields: upload cover, universe title, genre, description, tags, chapter title, chapter text, chapter summary, submit for review, and preview.
- Limit the book description to around 150 characters so cards stay clean.
- Keep the word count and average reading time because they are useful and well positioned.
- Add clear writing limits for chapters: minimum length, maximum length, and recommended length.
- The exact chapter length should be confirmed with a writer, because we need to know what is too short, enough, or too long.
- Keep the reward note, such as +50 coins for submitting and +200 if the universe is approved.

Example screenshots

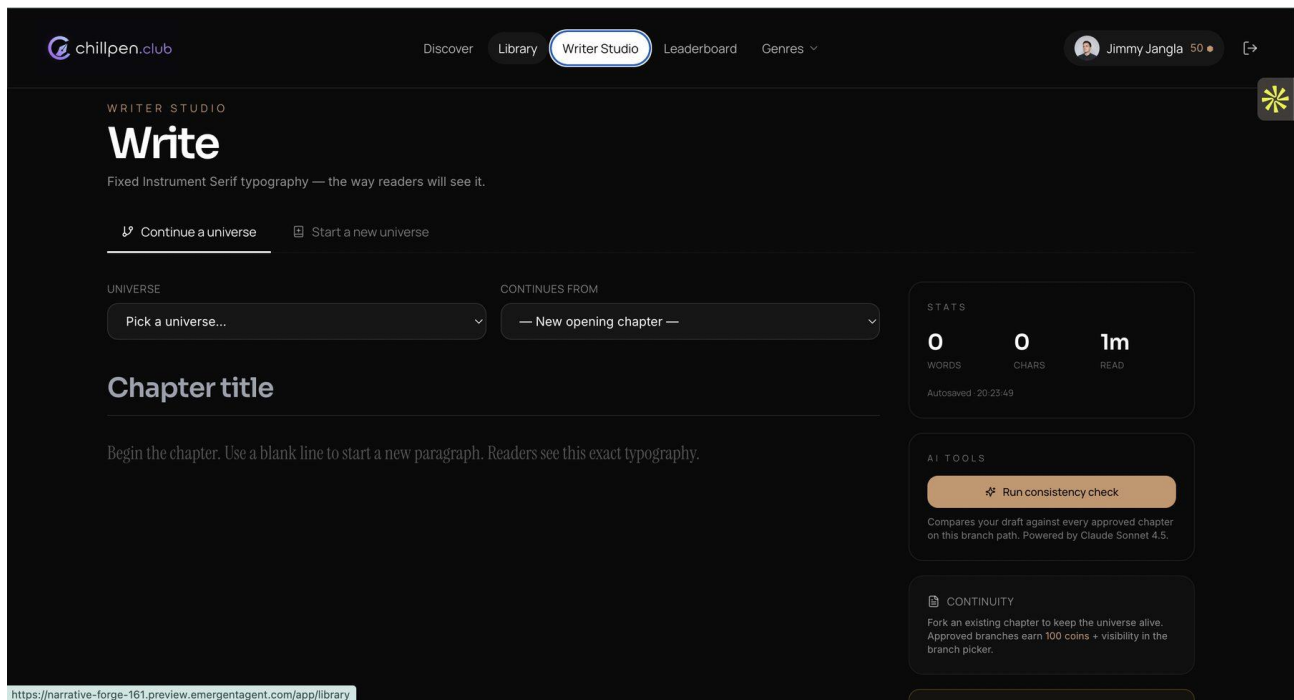

10. Writer studio – WHEN CREATING A NEW BOOK

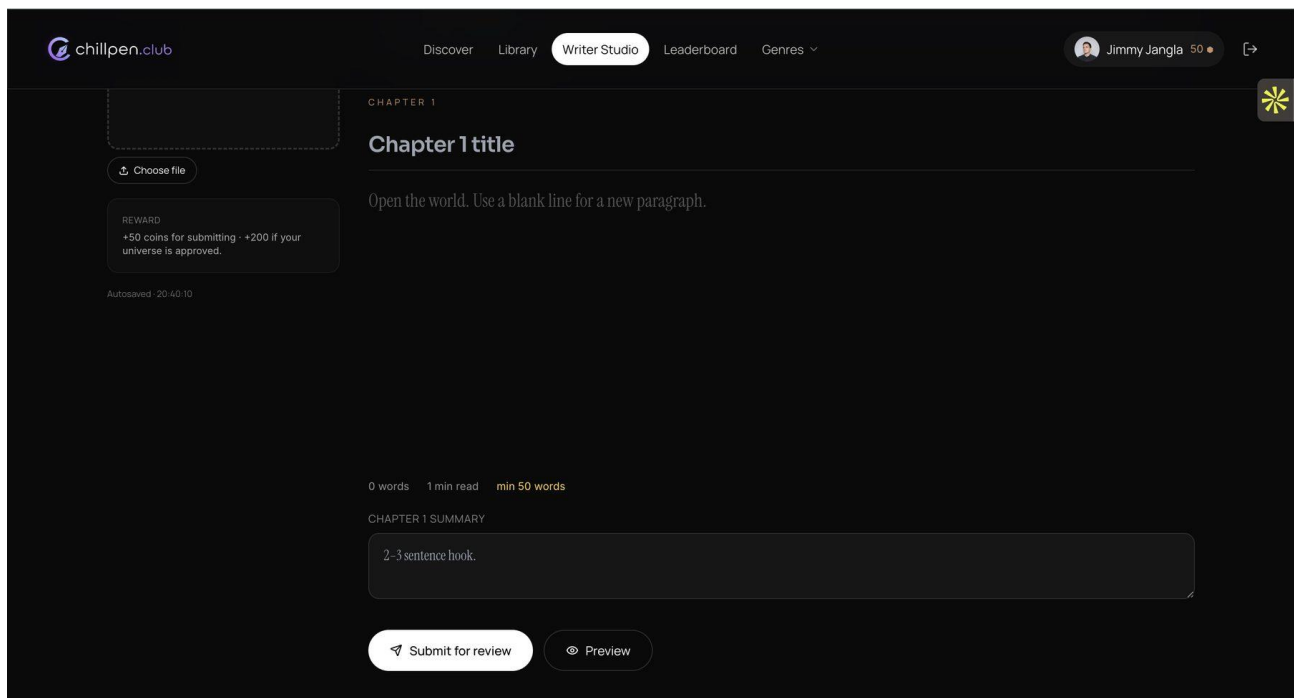

- Amazing – upload cover – title genre – description (limit description to 150 characters please) – tags and all
- amazingly fitted ai or whatever that is at the end – counting the words and average minutes that you need to read it.
- thing we need to do also is limit the chapters to a certain ammount of characters/letters or words – need to speak with a writer what is enough and what is short and what is too much

that's all my 10 points bro. i will summarize them for you now with chatgpt

WhatsApp reference: Writer Studio, book creation, and chapter limits.

Clean example: Continue a universe view in Writer Studio.

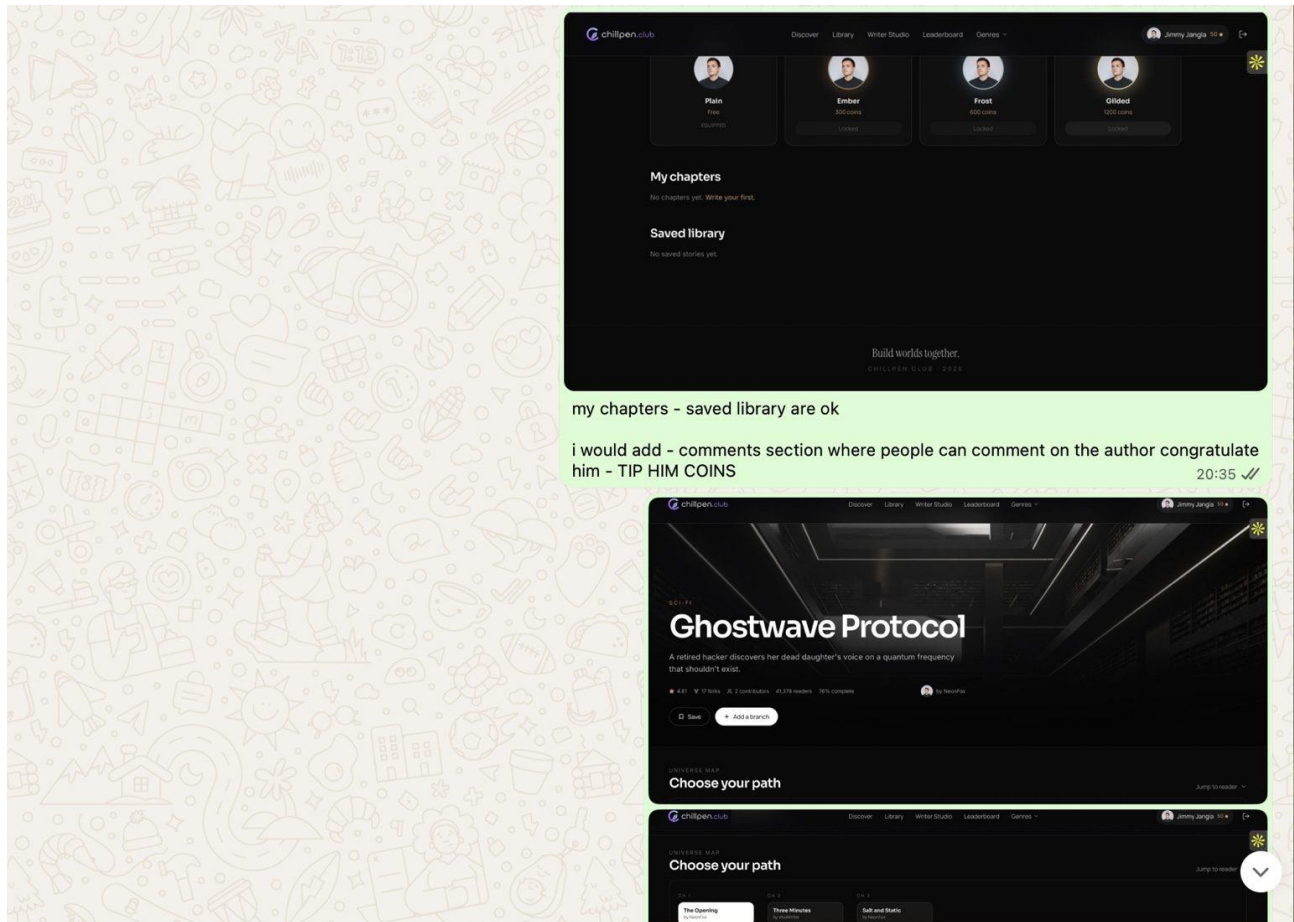

Clean example: Writer Studio chapter editor and submit flow.

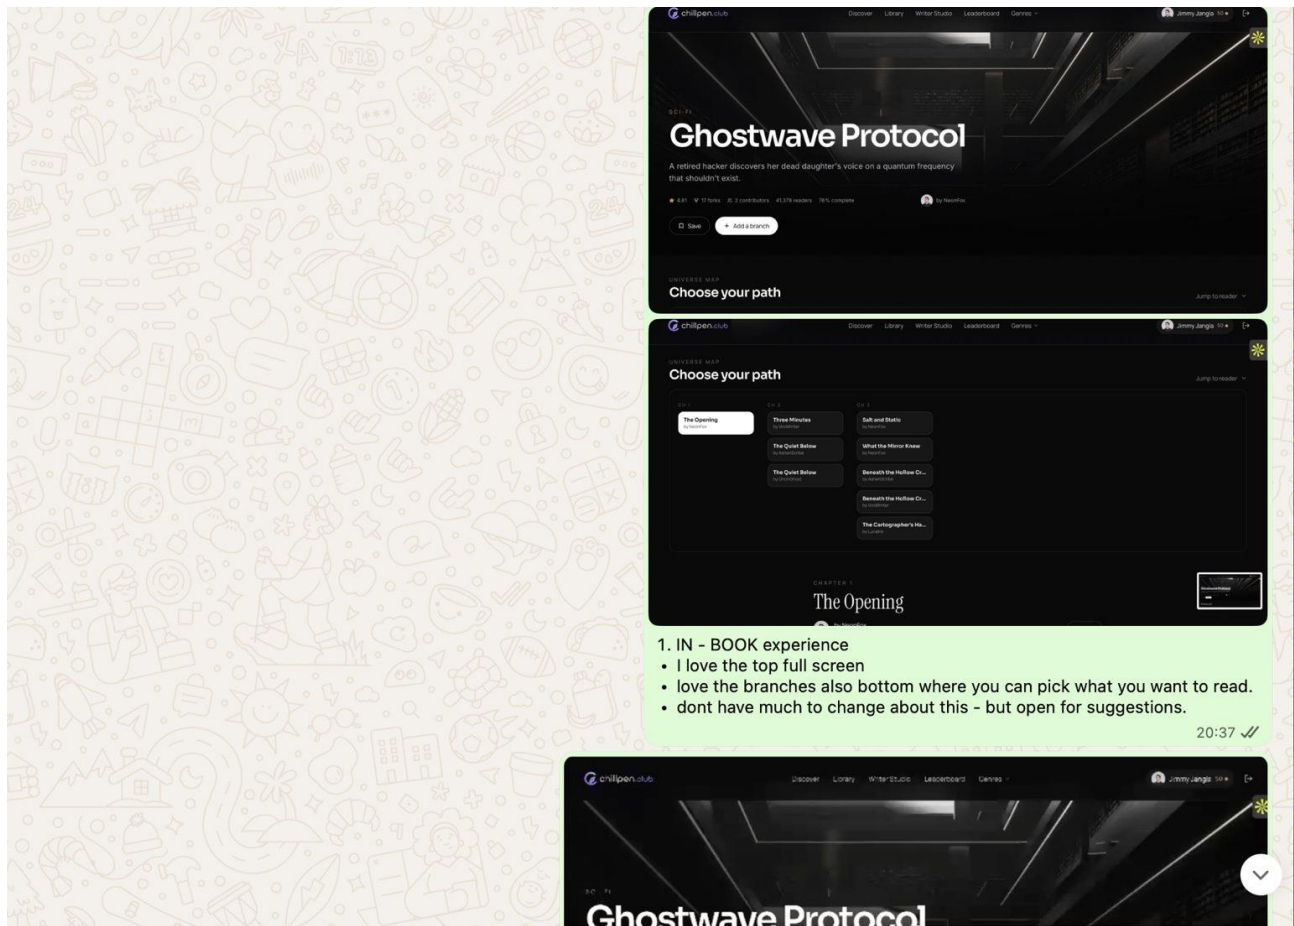

Additional user panel redesign notes

- The current user panel does not yet match the premium quality of the rest of the platform and should be redesigned.
- Add a proper writer bio area where authors can introduce themselves.
- Keep My chapters and Saved library, because those sections are useful.
- Add a comments section where readers can congratulate the author or leave comments about the author's work.
- Add coin tipping so readers can tip writers directly.
- Keep the avatar frames concept, but make it more elegant and less like a basic shop.
- Avatar upgrades should clearly support uploading an avatar, unlocking special frames, and potentially adding AI-generated avatar/cosmetic styles later.

Example screenshots

WhatsApp reference: user panel redesign feedback.

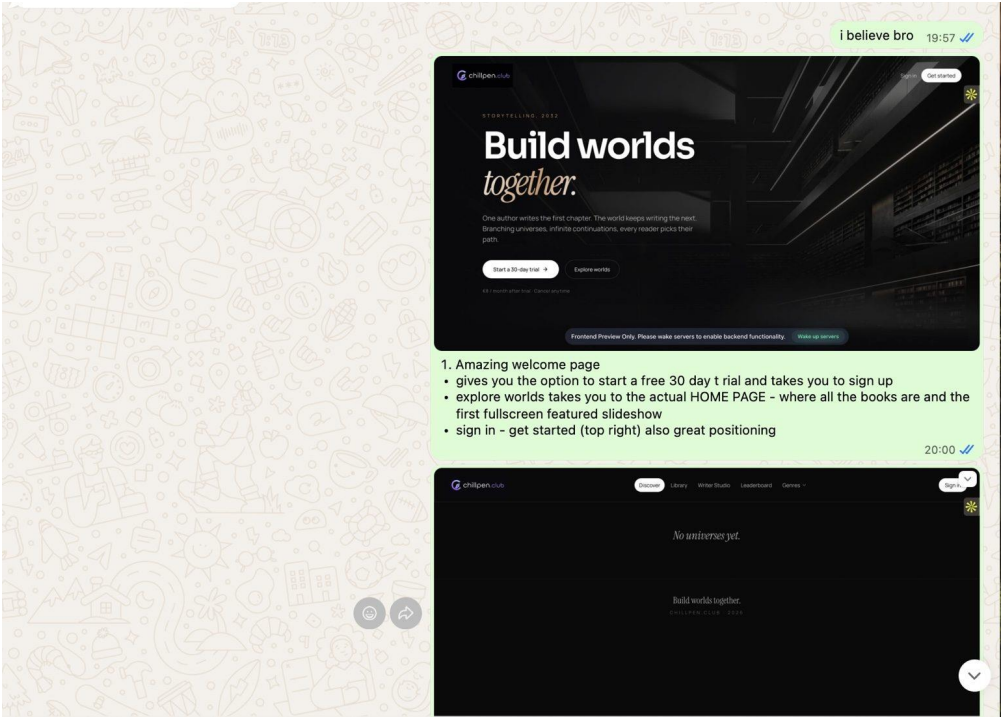

WhatsApp reference: user panel comments, saved library, and tipping ideas.

Target end-to-end user journey

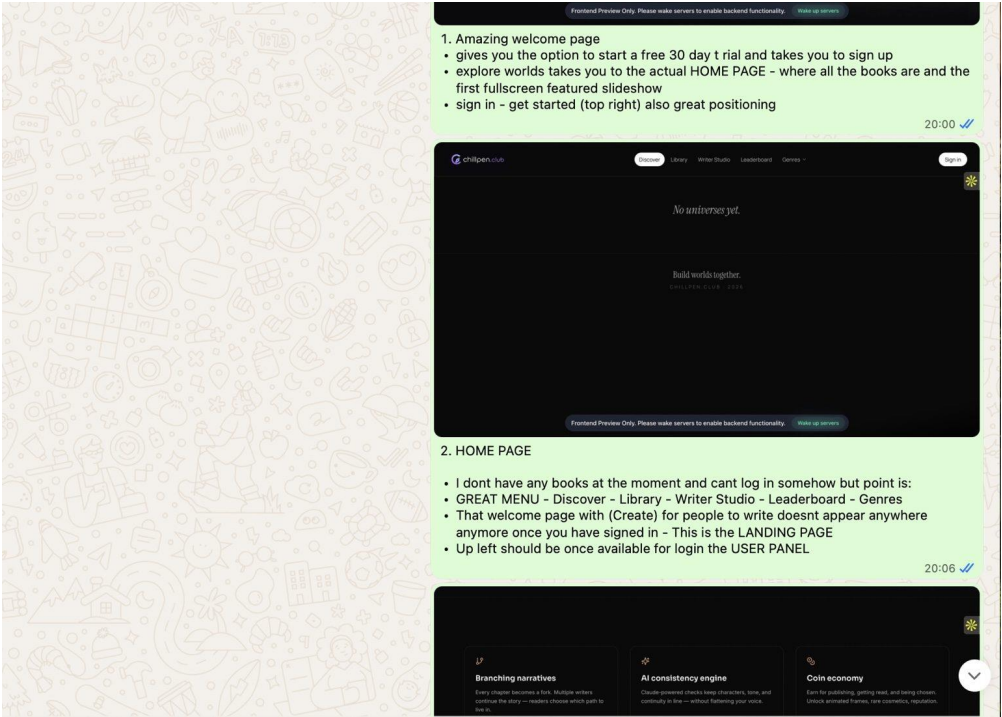

Landing page -> Sign up -> Payment/free trial -> Discover books -> Save books -> Read -> Choose a branch -> Continue writing -> Writer Studio -> Submit for review -> Profile and leaderboard engagement

Screenshot appendix - full reference set
